VESPA

VESPA - the new patented clever packaging for optimum storage!

DURABLE – protecting from moisture loss

As pre-compressed tapes are drying out easily in case of long storage **VESPA** protects from moisture loss.

As **VESPA** provides a constant atmosphere inside the bag the pre-compressed tape keeps its original performance over a long period. Without **VESPA** the tape would expand very slowly.

KEEPING SHAPE – rolls remain dimensionally stable

- **VESPA** saves every additional overpack because it prevents any axial displacement and any expansion of the pre-compressed rolls in case of inadequate storage (see picture).

HANDY – no additional packaging necessary

- **VESPA** simplifies the shipping from retailer to customer:
Apply the address label directly to **VESPA** and ship.

Pre-compressed tape packed up in plain lamination sheet after accelerated storage / Institut OFI, Vienna

Benefit from various cost-saving advantages!
